

Planning Step 5 - Scheduling

Plan Your Development Timeline

Overview: Your development schedule is impacted by the budget you choose to execute. We'll create an ideal schedule based on how much money you'd like to spend over a set period of time. We'll break down each milestone into sprints to help us execute your product in the most efficient manner possible.

Step Deliverable: Development Schedule

What is a Sprint?

A: A sprint is a development term used to block out sections of your project. We will take your project and break it down into 2 week sprints. This is done so that you can see and test the progress of your product as it moves through development. We want you to provide detailed feedback along the way to help guide the execution of your product.

How many sprints are in a project?

A: The number of sprints has everything to do with the size of the project. For MVP development, we typically keep the total sprint count to 3-5.
